

DeviAligner

The driller's choice.

The DeviAligner is a state-of-the-art north seeking rig alignment system with the fastest settling time available on the market.

With live azimuth, inclination and roll angle measurement, DeviAligner provides precise drill rig alignment with no flagging tape or surveyor required.

The highly accurate system can also be used to provide a starting reference for reference gyros and some continuous survey modes for north seeking gyros, as well as for accurate collar reference checks in exploration and production applications.

- ✗ **Ultra portable** - Lightweight, compact and rugged, the DeviAligner is ultra portable and withstands the toughest of drilling environments.
- ✗ **Wireless communication** - DeviAligner features an easy to operate Android application, wireless communication and the ability to import drill plans directly to the handheld device with real time readings in True North or Mine Grid.
- ✗ **Smart battery pack** - Commercially available batteries can be easily hot swapped for operation throughout a full shift.

- ✗ **Fast settling time** - Just 10-15 minutes is required for fine alignment.
- ✗ **Multiple size mounting bracket** - DeviAligner is compatible with a wide range of drill rig sizes.
- ✗ **IMDEXHUB-IQ™ connected** - Alignment data is pre-loaded and transferred back into IMDEXHUB-IQ, securely optimising the data transition and management process whilst minimising the risk of manual entry error.
